

Bloxels Kits

WHAT'S IN THE KIT

- 8 Bloxels sets per kit — game boards and colored cubes

QUICK-START GUIDE

1. Lay colored blocks on the grid board — each color is a game element (terrain, hazard, coin, enemy).
2. Photograph the board with the free Bloxels app.
3. The layout becomes a playable platformer level instantly.
4. Design characters and art the same way — block by block.

FULL LESSONS IN THIS GUIDE

GRADES 3-5	Story-World Game Design	page 2
GRADES 6-8	Game Design Studio	page 3

PRO TIP: The physical-to-digital moment when their block layout becomes playable is pure magic — don't spoil it, let them discover.

Bloxels Kits

LESSON · GRADES 3-5

Story-World Game Design

LEARNING OUTCOMES

- Students will translate narrative elements into game mechanics
- Students will design a playable level with intentional difficulty
- Students will explain design decisions with story evidence

MATERIALS

- Bloxels kits (boards + blocks)
- Tablets with the free Bloxels app
- A shared class book or individual choices
- Design planning sheet: setting, obstacles, goal

INSTRUCTIONS

1. Map story to mechanics together: what plot obstacle becomes a hazard? What's the goal block?
2. Students plan on the sheet: which scene, which obstacles, where's the win?
3. Build levels physically on the grid boards — each color has a game meaning.
4. Capture with the app; the layout becomes instantly playable.
5. Playtest a partner's level; the designer observes silently.
6. Author's chair: designers justify each hazard with story evidence.

ACTIVITY

Story-World Game Design — a book's setting and obstacles rebuilt as a playable level. Justifying every hazard with story evidence turns game design into a comprehension assessment.

Bloxels Kits

LESSON · GRADES 6-8

Game Design Studio

LEARNING OUTCOMES

- Students will design multi-room games with difficulty progression
- Students will run structured playtests and gather usable feedback
- Students will revise designs based on player data

MATERIALS

- Bloxels kits + tablets with the app
- Game design doc template: rooms, difficulty curve, player path
- Playtest feedback form: stuck points, too easy/hard, fun rating
- Iteration log

INSTRUCTIONS

1. Teach difficulty curves: room 1 teaches the mechanic, room 3 tests mastery.
2. Teams design multi-room games in the doc before placing blocks.
3. Build and link rooms; capture into the app.
4. Structured playtests: three players per game, forms completed, designers silent.
5. Data review: where did every player get stuck? Is that intended?
6. Revise, retest, and publish to the class arcade with designer's notes.

ACTIVITY

Game Design Studio — multi-room games with intentional difficulty curves, revised from playtest data. Watching three players hit the same unintended wall converts designers to user-testing believers.
