

Code-a-Pillar

WHAT'S IN THE KIT

- 1 Code-a-Pillar with rearrangeable direction segments

QUICK-START GUIDE

1. Snap segments together — each is one instruction (forward, left, right).
2. Press Go and watch it crawl the sequence.
3. Rearrange segments to change the program.
4. Set targets on the floor to crawl toward.

FULL LESSONS IN THIS GUIDE

GRADES K-2

Get to the Leaf

page 2

PRO TIP: Great single-station tool for centers; pairs naturally with Code Mouse for a K-2 coding day.

Code-a-Pillar

LESSON · GRADES K-2

Get to the Leaf

LEARNING OUTCOMES

- Students will compose a program from physical instruction segments
- Students will predict a path before running it
- Students will revise a sequence based on observed results

MATERIALS

- Code-a-Pillar with all segments
- Paper leaf targets and floor space
- Prediction cards (arrows) for pre-planning

INSTRUCTIONS

1. Demo: connect 3 segments, ask the class to predict where it will crawl, then run.
2. Place a paper leaf across the rug as the target.
3. Small groups arrange arrow prediction cards first, then snap matching segments.
4. Run, observe, and adjust one segment at a time.
5. Celebrate the reach-the-leaf moment; then move the leaf somewhere harder.
6. Closing question: why did changing one piece change the whole journey?

ACTIVITY

Get to the Leaf — predict, run, revise with a programmable caterpillar. Moving the target after success keeps the challenge alive for fast groups.
