

Code Mouse Kits

WHAT'S IN THE KIT

- 12 Code Mice per kit
- Maze platforms and walls
- Code sequence blocks

QUICK-START GUIDE

1. Build a simple maze with the platforms and walls.
2. Students plan the mouse's route using the code blocks (arrows).
3. Press the same sequence on the mouse's back buttons.
4. Hit Go — debug and retry until the mouse reaches the cheese!

FULL LESSONS IN THIS GUIDE

GRADES K-2

Cheese Quest

page 2

PRO TIP: Have students always lay out the code blocks first — it makes their thinking visible and debuggable.

Code Mouse Kits

LESSON · GRADES K-2

Cheese Quest

LEARNING OUTCOMES

- Students will plan a sequence of steps before executing it
- Students will debug a program by finding the wrong step
- Students will use directional vocabulary (forward, left, right) precisely

MATERIALS

- Code Mouse kits: mice, maze platforms, walls, code blocks
- Cheese targets
- Floor space or tabletops per small group

INSTRUCTIONS

1. Build a simple 3-move maze as a demo; think aloud while laying code blocks.
2. Rule one: always lay the code blocks first, then press the buttons to match.
3. Groups build a maze for the mouse and program the path to the cheese.
4. When the mouse misses, find the exact block where the plan went wrong — that's debugging.
5. Teams rebuild mazes for another group to solve.
6. Circle time: 'What did you do when it didn't work the first time?'

ACTIVITY

Cheese Quest — students physically lay out their program in blocks before pressing buttons, making their thinking visible and their bugs findable. Turn-taking and perseverance ride along free.
