

Sphero indi Class Pack

WHAT'S IN THE KIT

- 8 indi robots
- Color tile sets (each color = a command)
- Challenge cards
- Charging case

QUICK-START GUIDE

1. Lay color tiles on the floor — each color is a command (turn, speed up, celebrate).
2. Place indi at the start and let it drive the tile path.
3. Students redesign tile sequences to change the route.
4. Older students can re-map what colors mean in the Sphero Edu Jr app.

FULL LESSONS IN THIS GUIDE

GRADES K-2	indi Storybook Roads	page 2
GRADES 3-5	Custom Command Lab	page 3

PRO TIP: Tape the tiles down lightly for younger groups — enthusiastic feet relocate roads.

Sphero indi Class Pack

LESSON · GRADES K-2

indi Storybook Roads

LEARNING OUTCOMES

- Students will build a command sequence using color tiles
- Students will use positional and directional words while narrating a route
- Students will predict a robot's behavior before running it

MATERIALS

- indi robots + color tile sets (1 station per 3-4 students)
- Story map elements: paper buildings, park, school
- Painter's tape to anchor tiles
- Tile meaning reference cards

INSTRUCTIONS

1. Circle demo: place three tiles, ask for predictions, run indi, cheer.
2. Teach the tile vocabulary: each color is a command indi reads as it drives.
3. Groups build a story road: 'drive indi from home to school, past the park.'
4. Prediction ritual before every run: point and say what each tile will do.
5. Narration pass: students retell indi's journey with position words as it drives.
6. Remix: rearrange three tiles to change the story's route.

ACTIVITY

indi Storybook Roads — tile roads through a story map, with prediction before every run and narration during. Sequencing and directional language, zero screens, maximum delight.

Sphero indi Class Pack

LESSON · GRADES 3-5

Custom Command Lab

LEARNING OUTCOMES

- Students will reassign meanings to create a custom command system
- Students will design a puzzle course for another team to decode
- Students will explain encoding: same symbol, different meaning

MATERIALS

- indi robots + tiles
- Tablets with Sphero Edu Jr app
- Puzzle design sheet (what each color now means)
- Answer envelopes for course keys

INSTRUCTIONS

1. Review standard tile meanings with a quick warm-up course.
2. Reveal the twist: the app can REMAP what each color does.
3. Teams invent a custom color code and document it on the design sheet.
4. Each team builds a puzzle course that only makes sense under their new code.
5. Teams swap courses (keys sealed in envelopes) and decode by observation.
6. Debrief: how did you crack it? Connect to codes and protocols in computing.

ACTIVITY

Custom Command Lab — reprogram what the colors mean, then challenge rivals to decode your system by watching indi behave. Abstraction and encoding, disguised as espionage.
