

KUBO Robot Kit

WHAT'S IN THE KIT

- KUBO robot
- TagTile coding tiles
- Activity map
- Educator's guide

QUICK-START GUIDE

1. Students snap TagTiles together into a 'program' on the map.
2. Place KUBO on the start tile — it reads and performs the route.
3. Introduce function tiles to teach reusable code chunks.
4. The educator's guide has ready-made lesson sequences.

FULL LESSONS IN THIS GUIDE

GRADES K-2

Tile Trail Adventures

page 2

PRO TIP: The function-tile concept is unique among K-2 robots — lean into it.

KUBO Robot Kit

LESSON · GRADES K-2

Tile Trail Adventures

LEARNING OUTCOMES

- Students will build programs from physical instruction tiles
- Students will create and reuse a function
- Students will explain why reusing code saves work

MATERIALS

- KUBO robot + TagTile sets + activity map
- Educator's guide lesson sequences
- Route challenge cards

INSTRUCTIONS

1. Demo: snap tiles into a short program, place KUBO on the start, watch it read and drive.
2. Students solve route challenges by building tile programs.
3. The big moment: teach the function tiles — record a sequence once, reuse it by name.
4. Challenge: a route that repeats a pattern — build it with and without a function.
5. Count tiles used both ways: the function way wins visibly.
6. Circle: when in life do we make a 'recipe' so we don't repeat every step?

ACTIVITY

Tile Trail Adventures — route-solving with physical code, crowned by KUBO's signature trick: recording a tile sequence as a reusable function. The tile-count comparison makes abstraction visible to six-year-olds.
