

DJI Mavic 2 Drone

WHAT'S IN THE KIT

- DJI Mavic 2 drone + controller (iPhone/Android connectors)
- 3 rechargeable batteries + multi-charger
- Protective carrying case
- SD cards

QUICK-START GUIDE

1. Adults fly or directly supervise — review school/district drone guidance first.
2. Charge all 3 batteries; each gives ~25 minutes.
3. Calibrate compass at the flight site.
4. Fly open outdoor areas only, away from people and buildings.
5. Footage saves to SD for classroom editing.

FULL LESSONS IN THIS GUIDE

GRADES 6-8	Bird's-Eye Geography	page 2
GRADES 9-12	Aerial Storytelling	page 3

PRO TIP: Pair with WeVideo subscriptions to edit the aerial footage into finished films.

DJI Mavic 2 Drone

LESSON · GRADES 6-8

Bird's-Eye Geography

LEARNING OUTCOMES

- Students will interpret aerial imagery and connect it to ground truth
- Students will create an accurate labeled map from photographs
- Students will compare perspectives: ground, aerial, satellite

MATERIALS

- DJI Mavic 2 (adult-piloted) + charged batteries
- Pre-captured aerial photos of school grounds (from the flight session)
- Printed satellite view of the same area
- Map-making supplies or digital annotation tools

INSTRUCTIONS

1. Flight session (adult pilots, students direct): capture overhead shots of the school grounds.
2. Students orient the aerial photos: find north, the entrance, their classroom window.
3. Map task: produce a labeled map from the aerial imagery with a scale estimate.
4. Compare with the satellite view: what changed? What does higher altitude hide?
5. Ground-truth walk: verify three map labels physically.
6. Discuss: who uses aerial imagery professionally, and for what decisions?

ACTIVITY

Bird's-Eye Geography — their own school from above, turned into labeled maps and checked against satellite views. Scale and perspective land differently when it's your own playground.

DJI Mavic 2 Drone

LESSON · GRADES 9-12

Aerial Storytelling

LEARNING OUTCOMES

- Students will storyboard and direct aerial cinematography
- Students will plan shots within regulatory and safety constraints
- Students will produce a finished video incorporating aerial footage

MATERIALS

- DJI Mavic 2 (adult pilot at the controls)
- Storyboard templates and shot-list sheets
- FAA/district drone guidance summary
- WeVideo or editing suite for post-production

INSTRUCTIONS

1. Ground school first: airspace basics, district rules, why the adult flies.
2. Teams storyboard a campus documentary or tour: establishing shots, reveals, tracking moves.
3. Shot-list review: each requested shot needs a purpose and a safe flight path.
4. Flight day: students direct ('higher, slower, pan left') while the adult pilots.
5. Edit the footage into the planned piece with narration and music.
6. Premiere plus a production debrief: which storyboarded shots survived reality?

ACTIVITY

Aerial Storytelling — students direct the shots, an adult flies them, and the edit reveals which plans worked. Cinematography planning plus real-world aviation constraints in one production.
