

Ozobot Kits

WHAT'S IN THE KIT

- 18 Ozobots per kit
- Markers
- Chargers
- Coding sheets

QUICK-START GUIDE

1. Calibrate each Ozobot on a black dot before use (hold button, place on dot).
2. Draw thick black lines — Ozobot follows them.
3. Add color-code sequences (blue-red-blue = turbo!) from the code sheets.
4. Level up to [Ozoblockly.com](https://www.ozoblockly.com) for block-based programming.

FULL LESSONS IN THIS GUIDE

GRADES K-2	Color Code Roads	page 2
GRADES 3-5	Story Path Maps	page 3
GRADES 6-8	Ozoblockly Precision Challenges	page 4

PRO TIP: With 4 kits × 18 bots, you can outfit multiple classrooms at once — great for grade-level events.

Ozobot Kits

LESSON · GRADES K-2

Color Code Roads

LEARNING OUTCOMES

- Students will draw paths a robot can follow
- Students will use color codes to control robot behavior
- Students will predict and verify code effects

MATERIALS

- Ozobots (calibrated) + markers
- Large white paper
- Code reference sheets (speed, spin, direction)
- Prediction cards

INSTRUCTIONS

1. Calibrate bots on the black dot together — make it a ritual.
2. Draw thick black roads; watch bots follow them.
3. Introduce one code at a time: blue-red-blue means turbo!
4. Before each new code, students predict with cards: faster, slower, or spin?
5. Free-draw roads with at least three codes embedded.
6. Bot parade: bots run every road while artists narrate the codes.

ACTIVITY

Color Code Roads — draw the road, embed the codes, predict the behavior. Programming with markers keeps the focus purely on cause and effect.

Ozobot Kits

LESSON · GRADES 3-5

Story Path Maps

LEARNING OUTCOMES

- Students will represent a narrative or journey as an annotated path
- Students will sequence events accurately from a source text
- Students will present a story through a robot's journey

MATERIALS

- Ozobots + markers + large paper
- Source content: a novel's plot, the Oregon Trail, a historical journey
- Event card template for each stop
- Code reference sheets

INSTRUCTIONS

1. Teams list 5-7 key events from the source in sequence.
2. Map design: the journey becomes a road; each event is a labeled stop.
3. Add meaning through codes: slow zones for hardships, turbo for escapes, spins for celebrations.
4. Draw final maps with event cards placed at each stop.
5. Story runs: the bot travels while the team narrates each stop.
6. Audience checks sequence accuracy against the source.

ACTIVITY

Story Path Maps — plots and historical journeys become annotated Ozobot roads where the codes carry meaning: slow for the hard parts, turbo for the escapes. Retelling with a robot narrator.

Ozobot Kits

LESSON · GRADES 6-8

Ozoblockly Precision Challenges

LEARNING OUTCOMES

- Students will program precise geometric paths in Ozoblockly
- Students will calculate angles and distances for closed figures
- Students will debug the gap between intended and actual geometry

MATERIALS

- Ozobots + devices with ozoblockly.com
- Printed target shapes: square, triangle, star, figure-eight
- Protractors and rulers for verification
- Large paper for bots to draw on (marker holder optional)

INSTRUCTIONS

1. Review exterior angles: what must a bot turn to draw a square? A triangle? A star?
2. Teams calculate the full move/turn program on paper before coding.
3. Program in Ozoblockly and run on paper — the drawn path is the evidence.
4. Measure the result: are the angles right? Does the shape close?
5. Debug the geometry: distinguish math errors from calibration drift.
6. Ladder up: whoever closes a five-pointed star earns legend status.

ACTIVITY

Ozoblockly Precision Challenges — program exact geometric paths and verify with a protractor. When the square doesn't close, the debugging conversation IS the geometry lesson.
