

Sound Shield Vocal Filters

WHAT'S IN THE KIT

- 2 Sound Shield vocal reflection filters

QUICK-START GUIDE

1. Position the shield behind the microphone, curved toward the speaker.
2. Record close to the mic (6-8 inches) inside the shield's curve.
3. Any quiet corner becomes a passable recording booth.

FULL LESSONS IN THIS GUIDE

GRADES 3-5	Fluency Recording Booth	page 2
GRADES 6-8	Voiceover Studio	page 3
GRADES 9-12	Audiobook Chapter Project	page 4

PRO TIP: Checks out perfectly alongside the Podcasting Kit — together they sound studio-grade.

Sound Shield Vocal Filters

LESSON · GRADES 3-5

Fluency Recording Booth

LEARNING OUTCOMES

- Students will record fluent expressive reading
- Students will self-evaluate recordings against fluency criteria
- Students will track growth across multiple recordings

MATERIALS

- Sound Shield + any recording device/mic
- Self-selected passages at appropriate levels
- Fluency rubric: pace, expression, accuracy
- Digital portfolio folder per student

INSTRUCTIONS

1. Set up the recording booth corner with the shield and a visual 'recording' sign.
2. Students rehearse their passage until they choose to record — readiness is theirs.
3. Record in the booth; listen privately with the rubric.
4. One re-record allowed after self-assessment — revision, not perfection.
5. File each recording in the portfolio with a dated rubric.
6. Quarterly listen-back: students hear their own September self. That moment matters.

ACTIVITY

Fluency Recording Booth — a permanent classroom studio where students rehearse, record, self-assess, and archive. The quarterly listen-back to their earlier selves is the payoff.

Sound Shield Vocal Filters

LESSON · GRADES 6-8

Voiceover Studio

LEARNING OUTCOMES

- Students will apply microphone technique for clean recordings
- Students will record narration matched to visual pacing
- Students will diagnose and fix common audio problems

MATERIALS

- Sound Shield + podcasting mic
- Student video projects needing narration
- Mic technique cheat sheet: distance, plosives, levels
- Headphones for monitoring

INSTRUCTIONS

1. Demo the difference: record one sentence with and without the shield, near and far.
2. Teach the checklist: fist-distance from mic, off-axis for plosives, level check first.
3. Students script narration timed against their video scenes.
4. Record takes in the booth; monitor with headphones.
5. Diagnose lab: identify problems in sample clips (popping, echo, inconsistent levels).
6. Lay narration into projects and compare against scratch-audio versions.

ACTIVITY

Voiceover Studio — clean narration for their own video projects, with a before/after comparison that proves technique matters. The bad-audio diagnosis lab builds real engineering ears.

Sound Shield Vocal Filters

LESSON · GRADES 9-12

Audiobook Chapter Project

LEARNING OUTCOMES

- Students will analyze professional narration craft
- Students will perform sustained narrative reading with character and pacing choices
- Students will produce a polished long-form audio recording

MATERIALS

- Sound Shield + quality mic + recorder
- Novel/story chapters (student choice with approval)
- Narrator analysis sheet (from an audiobook sample)
- Editing software for assembly

INSTRUCTIONS

1. Study a professional audiobook clip: mark pace shifts, character voicing, breath control.
2. Students select chapters and annotate scripts with performance choices.
3. Rehearse difficult passages: names, dialogue transitions, emotional turns.
4. Record in sessions — long-form stamina is part of the skill.
5. Edit: remove errors while preserving natural rhythm.
6. Publish a class 'audiobook shelf'; option to share readings with elementary buddies.

ACTIVITY

Audiobook Chapter Project — sustained narration with annotated performance choices, edited to publishable quality. Sharing finished chapters with younger buddy classes gives the work an audience.
