

StikBot Stop Motion Kit

WHAT'S IN THE KIT

- Various StikBot poseable figures
- Phone tripod
- Blue/green screen

QUICK-START GUIDE

1. Download the free Stikbot Studio app (or any stop-motion app).
2. Mount the phone/tablet on the tripod — stability is everything.
3. Pose, snap, move slightly, snap again. ~10 frames per second of film.
4. Use the green screen to drop in any background.
5. Add voices and music in the app.

FULL LESSONS IN THIS GUIDE

GRADES K-2	One-Scene Wonders	page 2
GRADES 3-5	Animated Retell	page 3
GRADES 6-8	Green Screen Film Fest	page 4

PRO TIP: Patience-friendly tip: assign roles (director, animator, camera) and rotate every 20 frames.

StikBot Stop Motion Kit

LESSON · GRADES K-2

One-Scene Wonders

LEARNING OUTCOMES

- Students will understand animation as many still pictures
- Students will move a figure in small increments
- Students will collaborate within a simple production role

MATERIALS

- StikBot figures + phone tripod
- Tablet/phone with Stikbot Studio app
- Simple single-action prompts (wave, jump, dance)
- Role necklaces: animator, camera, director

INSTRUCTIONS

1. Show the magic first: flip a sticky-note flipbook or a 5-second sample.
2. Teach the rhythm: pose → snap → tiny move → snap.
3. Crews of three with role necklaces animate ONE simple action.
4. Coach 'tiny moves' constantly — it's the whole craft at this age.
5. Play each 5-second film for the crew: their poses, moving!
6. Rotate roles and animate a second action.

ACTIVITY

One-Scene Wonders — a 5-second animated wave or jump, made pose by pose. The moment their still photos start moving is genuine magic for this age.

StikBot Stop Motion Kit

LESSON · GRADES 3-5

Animated Retell

LEARNING OUTCOMES

- Students will storyboard a scene before production
- Students will animate smooth motion with consistent increments
- Students will retell narrative or process content through animation

MATERIALS

- StikBot kits + tripod + devices with the app
- Storyboard/shot list template
- Source content: book scene or science process (water cycle, seed growth)
- Simple set materials: paper backdrops, props

INSTRUCTIONS

1. Teams choose a scene or process and storyboard 4-6 shots first.
2. Set construction: quick paper backdrops, no more than 15 minutes.
3. Animate with the storyboard visible — every shot gets checked off.
4. Enforce the frame budget: about 10 frames per second of film keeps scope real.
5. Add narration or captions explaining the scene/process.
6. Premiere with the storyboard displayed beside each film: plan vs. product.

ACTIVITY

Animated Retell — book scenes and science processes animated shot by shot. The storyboard-first requirement is the hidden literacy lesson: the shot list is the essay outline.

StikBot Stop Motion Kit

LESSON · GRADES 6-8

Green Screen Film Fest

LEARNING OUTCOMES

- Students will write and produce an original short film
- Students will use green screen compositing in stop motion
- Students will score and sound-design a finished piece

MATERIALS

- StikBot kits with blue/green screen + tripod
- Devices with Stikbot Studio (green screen feature)
- Script and storyboard templates
- Festival ballot: story, animation, sound

INSTRUCTIONS

1. Greenlight round: teams pitch original short film concepts; class feedback sharpens them.
2. Full pre-production: script, storyboard, background image selection.
3. Shoot on the green screen; backgrounds composite in-app.
4. Production management: frame counts and shot logs keep multi-day shoots organized.
5. Post: music, effects, and voice — sound sells the story.
6. Film festival with categories: story, animation craft, sound design. Acceptance speeches encouraged.

ACTIVITY

Green Screen Film Fest — original scripted shorts with composited backgrounds and full sound design. Award categories split the craft so every kind of talent gets its trophy.
